LORE Every street has a story.

LORE Labs, Inc. (Delaware C-corp, planned) · Founder & CEO: Nimit Jain (nimitjain.248@gmail.com) · Pre-seed, November 2026 · Confidential

The ask: $1.75M pre-seed SAFE at a $12M post-money cap ($1.5M plus a $250k top-up, decision D14). Seed of $6M planned after Kickstarter (Aug 2027).

What it is

A pocket-sized AI travel companion that tells you the true, sourced stories of the city around you through your own earphones. Online or offline, with the phone left in your pocket. It covers history, hidden facts, directions, places to eat and stay, and safety features for solo travellers.

Problem

In a new city the phone does everything at once: guide, map, wallet and lifeline. It runs out of battery by late afternoon, it makes you a target (Greater Rome had 33,455 pickpocketing incidents in 2024, +68% vs 2019), roaming still causes bill shock (>70% of frequent travellers in one survey), and reading Wikipedia in front of a monument means you miss what is in front of you.

Product

- **Map Vision:** L1+L5 GNSS, a 9-axis IMU, step direction and building outlines tell LORE what is on your **left, right, ahead, behind** or worth a **"look up"**. There is no camera on the first models.
- **Verified stories:** 20–40 s stories built only from fact cards that each carry a source. The AI narrates but cannot invent history (D4).
- **Why a device:** built-in global eSIM (Square/Atlas), offline City Packs, a 2+ day battery separate from the phone, physical buttons (talk, "what's around me", SOS).

	Pebble	Square	Atlas
Price	**$149**	**$299**	**$599**
Key spec	Clip-on, AI via phone ("Lite", D10)	1.6" AMOLED, LTE Cat-1bis eSIM, on-device 3B model	Titanium + sapphire, Glance camera, satellite SOS

LORE Pass: Explorer $9.99/mo or $79/yr; Trip Pass $29 (14 days, 5 GB) or $49 (30 days, 10 GB). Every device includes 3 months free.

Traction to date (honest)

Pre-revenue, with no customers yet. A **working Rome prototype** (phone PWA) runs the real story engine on a **Rome City Pack of 86 places and 215 sourced fact cards**. In a **simulated** 1.93 km walk it made 17 narrations, repeated no facts, met 100% of quiet moments (crossings and conversations) and had a mean heading error of 4.3°. 61 + 16 automated tests pass. Hardware architecture, costed BOMs and simulations exist for all three models. Gate G0 user tests start now.

Market

TAM is **$10.7B/yr** top-down (2027) and **$24.0B** bottom-up. SAM is **8.7M travellers ≈ $1.44B/yr**. Research's 2030 SOM is **$93M** (250k units). There are tailwinds: 1.52B international arrivals in 2025, and travel eSIM is growing from $1.8B to $8.7B (2025 to 2030).

Competition

Google/Samsung Gemini glasses, Meta Ray-Ban, and "phone + AI-guide app + eSIM" are the main threats. Nobody else combines verified, directional stories with offline packs, its own data and SOS in a standalone, eyes-up device. Humane and Rabbit failed as general assistants with no daily job. Plaud shows that one narrow job, a clip-on device and a subscription can work.

Financial plan (base case, estimates)

	FY27	FY28	FY29	FY30	FY31
Revenue	$0.6M	$10.1M	$31.6M	$67.1M	$111.3M
Gross margin	11%	27%	33%	38%	41%

EBITDA break-even comes in **FY2031**. The plan needs **$55.5M** of total equity to reach it (D16). The Kickstarter base case is **$1.04M** from 4,600 backers (campaign 25 May to 24 Jun 2027; this is a plan, not a result).

Use of funds and milestones

About $500k for the founding engineering team, $322k for Kickstarter, brand and community, $210k for ID, ODM NRE and 50 EVT units, $168k for G&A, legal and IP, $40k for City Pack content, and about $510k held as a buffer through the Kickstarter. The money buys **G0** (≥40% "very disappointed", Jan 2027), **G1** (EVT battery ≥1.5 days, left/right ≥90%), and **G2** (≥$1M pledged, ≥3,000 backers, cost per backer <$60).

Key risks we are managing

The hardware margin on Square (cost-down to ≤$240 landed by unit 10k, otherwise the price moves to $329; D11, D15). Big Tech glasses. AI-gadget idle risk. All accuracy and battery figures are still simulated. LORE trademark clearance. The founder-led team still has to hire its founding engineers.
